

# AI Live Meeting Summarizer

By: Prachiti Morankar

# Project Overview

A comprehensive end-to-end solution that transforms meeting audio into actionable summaries with seamless export and delivery options.

## Audio Capture

Live recording and file upload support for flexible input methods

## Smart Processing

TF-IDF extractive summarization for key insights extraction

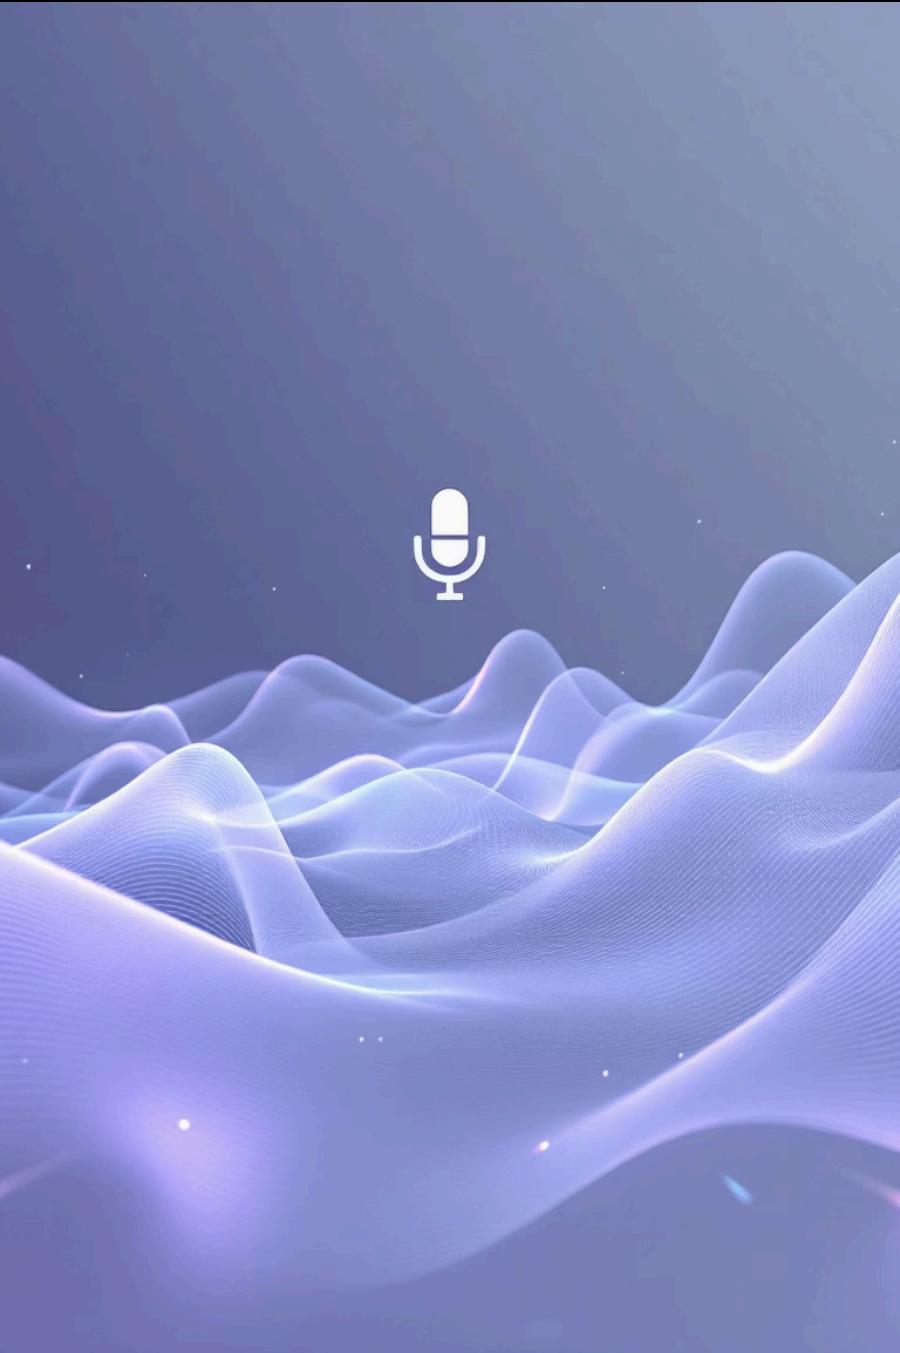

## Export Options

PDF, Markdown, and TXT formats for versatile distribution

## Delivery System

Automated email delivery with comprehensive session logging

# Milestone 1 – Speech-to-Text

The foundation of our system: converting spoken words into accurate, machine-readable text using industry-standard recognition technology.

01

---

## **Google SpeechRecognition Integration**

Implemented robust speech recognition engine with high accuracy rates

02

---

## **Dual Input Support**

WAV file upload and real-time microphone recording capabilities

03

---

## **Quality Assurance**

Target Word Error Rate (WER) below 15% through audio preprocessing

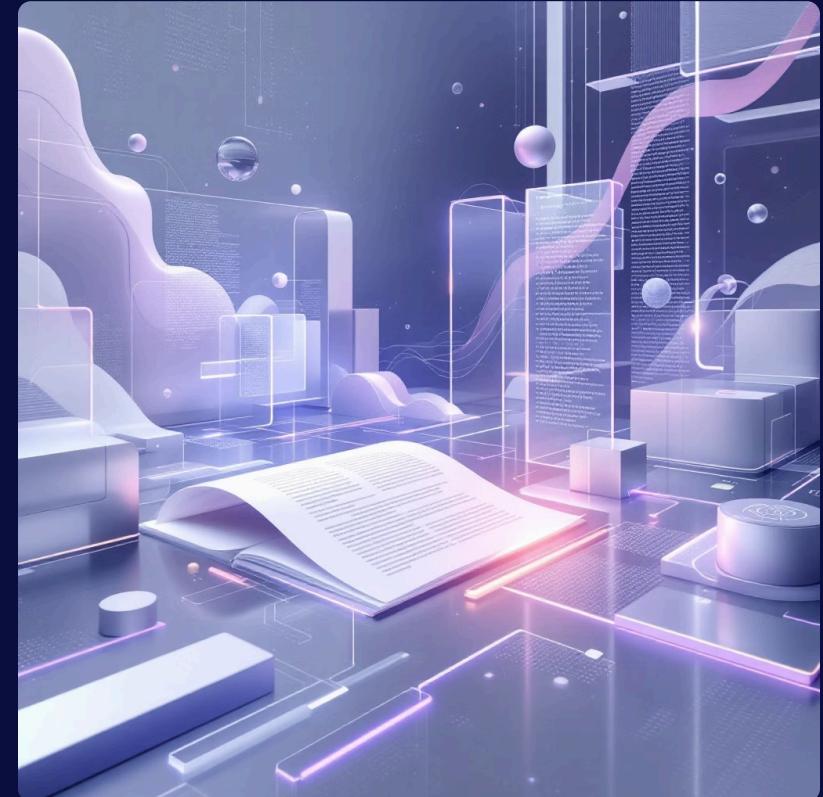

# Milestone 2 – Summarization

## Intelligent Content Extraction

Leveraging TF-IDF (Term Frequency-Inverse Document Frequency) methodology to identify and extract the most relevant information from transcribed content.

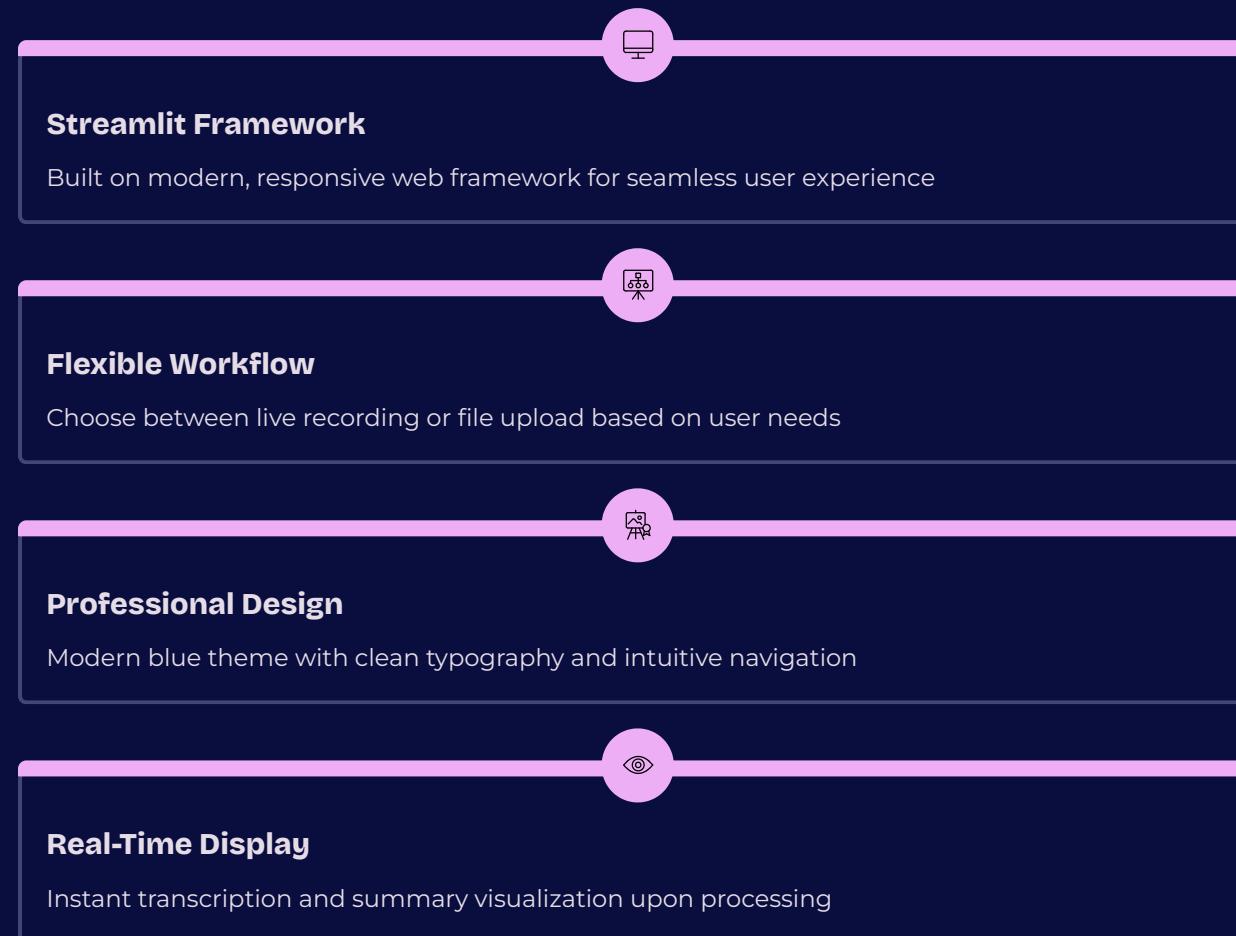

## Key Performance Metrics

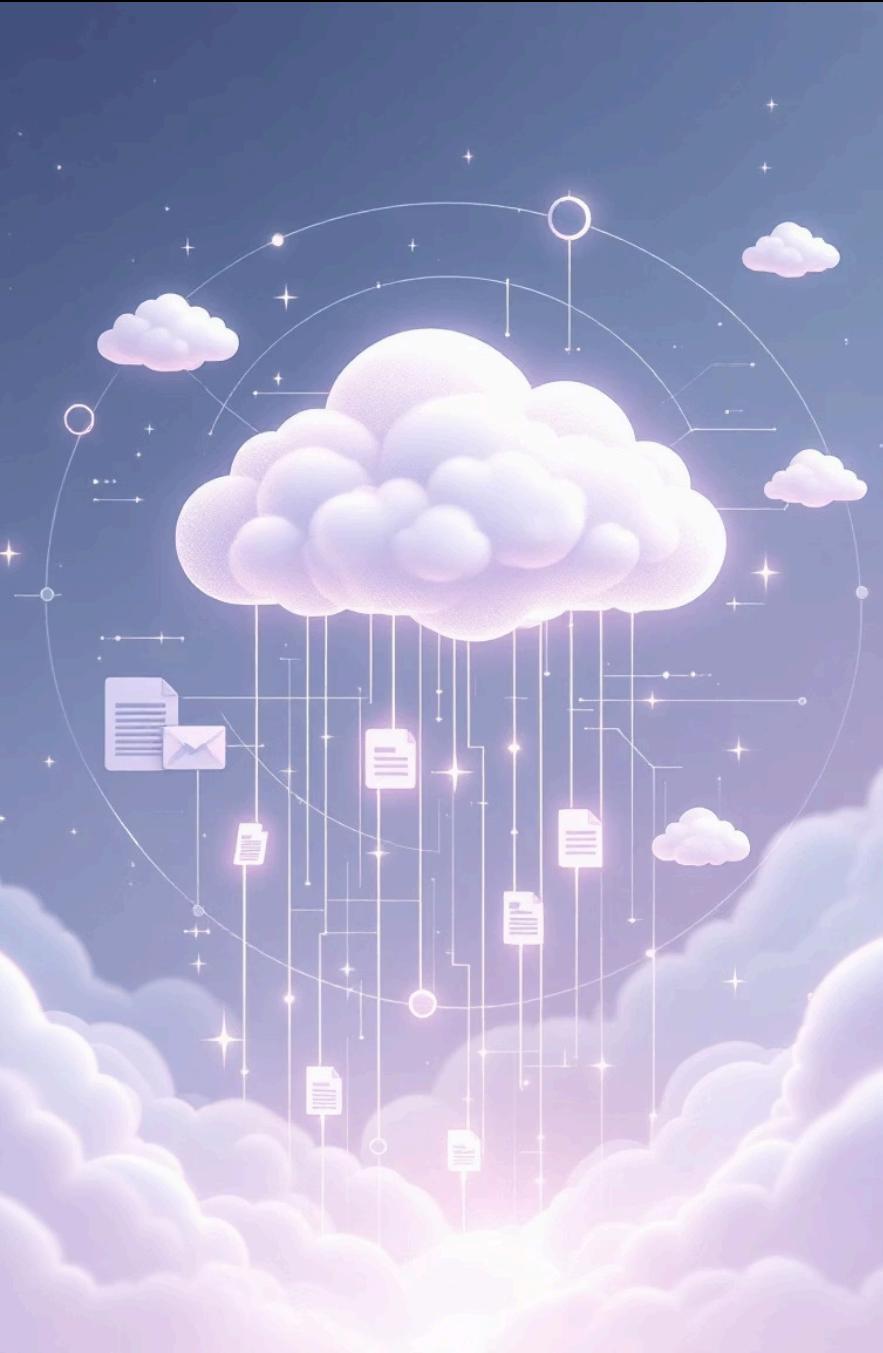

- ROUGE score target exceeding 0.40 for summary quality
- Extractive approach preserves original phrasing
- Clean, structured output with logical flow
- Automatic key point identification

# Milestone 3 – UI Integration

Designing an intuitive, professional interface that makes meeting summarization accessible to all users, regardless of technical expertise.

# Milestone 4 – Final Delivery

Completing the ecosystem with comprehensive export capabilities, automated distribution, and session tracking for enterprise-grade functionality.

## Export Capabilities

- **PDF format:** Professional documents with formatted layout
- **Markdown:** Developer-friendly plain text with structure
- **TXT files:** Universal compatibility for any system

## Delivery & Tracking

- **SMTP email:** Automated delivery to stakeholders
- **Session logging:** JSON and CSV format tracking
- **Full integration:** All components working seamlessly

# System Architecture

A modular, scalable design that ensures reliability and maintainability across all components of the meeting summarization pipeline.

# Tools & Technologies Used

- **Python**

Used as the primary programming language for backend logic, audio processing, summarization, and handling exports/emails.

- **Streamlit**

Modern UI framework used to build the web interface for recording audio, uploading files, displaying transcription & summary.

- **SpeechRecognition (Google Web Speech API)**

Used for converting speech→text from WAV recordings or uploads. No API key required.

- **sounddevice**

Used to record live microphone audio in real time and save it as .wav.

- **NumPy**

Used for numerical operations, helping with text processing and TF-IDF matrix calculations.

- **scikit-learn (TF-IDF Vectorizer)**

Implemented extractive summarization using sentence ranking based on importance scores.

- **fpdf2**

Used to export summaries and transcripts as downloadable **PDF files** with Unicode-safe fonts.

- **SMTP (smtplib + Gmail App Password)**

Email system used to send summaries with PDF/MD/TXT attachments directly from the app.

- **JSON / CSV Logging**

Session-based logging system to store transcripts, summaries, timestamps, and metadata for future reference.

# Challenges & Learnings

Every innovative project faces obstacles. Here's how we overcame technical hurdles to deliver a production-ready solution.

## SMTP Authentication

Navigated complex email security protocols and app-specific password requirements for reliable delivery

## Unicode PDF Handling

Resolved character encoding issues to support international characters and special symbols in exports

## Audio Quality Variations

Implemented preprocessing pipeline to handle diverse audio sources and background noise conditions

## Streamlit State Management

Mastered session state handling to maintain data consistency across user interactions

### Audio Input

File upload or live recording

### STT Engine

Speech recognition processing

### Reliable Design

Maintainability across pipeline components

### TF-IDF Summarizer

Intelligent content extraction

### Export System

Multi-format generation

# Future Scope

The roadmap ahead: expanding capabilities and preparing for real-world deployment at scale.

## Offline STT with Vosk/Whisper

Enable processing without internet dependency for privacy-sensitive environments

## Speaker Diarization

Identify and label individual speakers for multi-participant meeting clarity

## Multilingual Support

Expand to support transcription and summarization in multiple languages

## Cloud Deployment

Scale infrastructure for enterprise use with containerization and cloud hosting

**Process & Output**

Process Audio

**Transcription**

hello everyone welcome to the meeting

This screenshot shows the user interface of the AI Live Meeting Summarizer. On the left, there's a sidebar with 'Session Details' containing fields for Title ('Meeting Summary'), Date ('2025-11-11'), and Speakers (optional). Below this is an 'Email / Export' section with SMTP Host ('smtp.gmail.com') and Port ('465'). The main area has a blue header with the app's name and a microphone icon. It includes sections for 'Input Options' (with 'Upload WAV' selected), 'Process & Output' (with a 'Process Audio' button), and 'Transcription' (showing the text 'hello everyone welcome to the meeting'). At the bottom, there's a media player bar showing a play button, the time '0:00 / 0:03', and other controls.

# Conclusion

## Mission Accomplished

- **All Four Milestones Completed**

Delivered on schedule with all requirements met

- **Fully Functional Meeting Assistant**

End-to-end pipeline from audio to actionable summaries

- **Professional Export & Delivery**

Multiple formats with automated email distribution

- **Demo-Ready Application**

Polished UI ready for stakeholder presentation

Thank you for your attention. Ready for questions and demonstration.
